## COMMUNITY APPLICATIONS

Using the popular Sendmail Content Management API (Milter), users can develop and contribute applications that extend the functionality of the Sendmail Message Transfer Agent (component of Sentrion MPE). These Milter applications can be certified to run on the Sendmail family of Sentrion Message Processors. Browse the [milter.org](http://milter.org) website to learn more about the hundreds of Milter applications developed by the Sendmail user community.

If you are interested in certifying a Milter application to run on Sentrion, or if you are interested in using a Milter on Sentrion, please let us know.
